

NeuroAnalyzer report: LDF Processing

NeuroAnalyzer v0.3.0 · MATLAB 2026a · 2026-09-25T03:20:56+00:00 · window image: exportapp

LDF Processing

Filter and downsample LDF, then cut trials around stimulus onsets

Help

2 Filter & downsample (optional)

Settings...Undo

Downsampled LDFs to 100 Hz. Butterworth filter pass 1 Hz, order 4

3 Segment trials

Edm threshold2.5

Pre-onset (s)5

Post-onset (s)20

Min interval (s)10

Segment trials

8 trials, LDFs to 20.00 s around onset

4 Save trials

Save trials...

Click and drag to select the segment to fit. Open the file in LDF Average.

Save session...Open session...

Report (PDF)...

Session saved in ProcessingLDFApp session mat (1 input file(s) with VDS, settings and results).

postS = 20
minISI = 10
segmented = true
tab = Trials

KEY RESULTS
Loaded 260001 samples at 1000 Hz; processed rate 100 Hz
8 trials, -5.00 to 20.00 s; trial mean peaks at 150.7, 4.07 s
after onset
